

# DS Flags Report

andino

10/29/2020

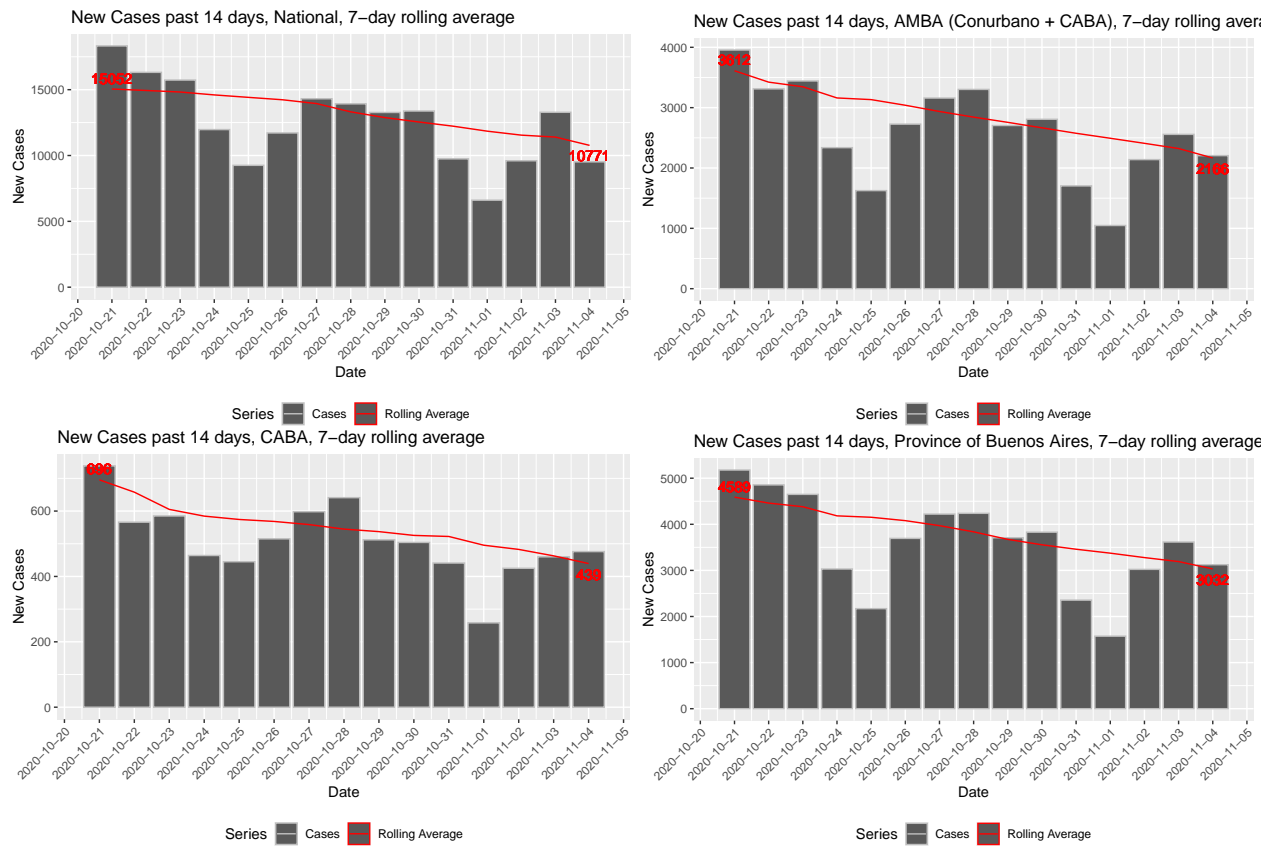

## New Cases

The following graphs show the overall epidemiological curves in the localities based on simple “new cases per day” as reported. Note that date of case report DOES NOT equal date of first symptoms or diagnosis, necessarily, as there are frequently reporting delays. Rather, this data is the change in cases from the previous day’s Ministry of Health report:

# 14-day trend

Phase 1: 14-day trend lines

## 28-day trend

Phase 2: 28-day trend lines

## ICU Capacity

## ICU Occupancy Rates
